

## **ABSTRACT**

A power outlet strip includes a housing having an upper casing secured to a lower casing and having an opening to receive a cover, the cover includes one or more apertures to receive one or more  
5 female receptacles each having two or more holes for receiving prongs. Two or three conductor blades are attached to the female receptacles, and each having one or more spring contacts aligned with the holes of the female receptacle for receiving the prongs. The cover may be changed to the other covers for providing different  
10 colors or the like for the outer appearance of the power outlet strip.
